NOTE FROM THE DIRECTOR

Welcome to the June 2022 issue of Trends! Which industry's workers have a longer work week in South Carolina: Construction or manufacturing? The answer is on page 21 ...

The dreaded r-word – “recession” – is seemingly on everyone’s lips these days. On July 28, the U.S. Bureau of Economic Analysis reported that real gross domestic product declined for the second straight quarter, which is a common, informal definition of what constitutes a recession. However, official determinations are made by the National Bureau of Economic Research in Cambridge, Massachusetts, and rely on a much wider array of data to determine if, and when, the country’s economy is officially in a downturn.

Stop me if you’ve heard this before, but our current economic situation is unprecedented. Recessions have always been accompanied by increased unemployment, so if we are in one, it’s a very weird one. South Carolina’s unemployment rate declined again to 3.2 percent in June, modestly below the national rate of 3.6 percent and not far from all-time low of 2.4 percent set in 2019. Both in South Carolina and across the country, businesses are still hiring and workers are switching jobs at high rates; this doesn’t make much sense, because if the economy is actually shrinking, that would typically be a time for consumers and firms alike to become much more cautious. My team and I will be watching developments closely.

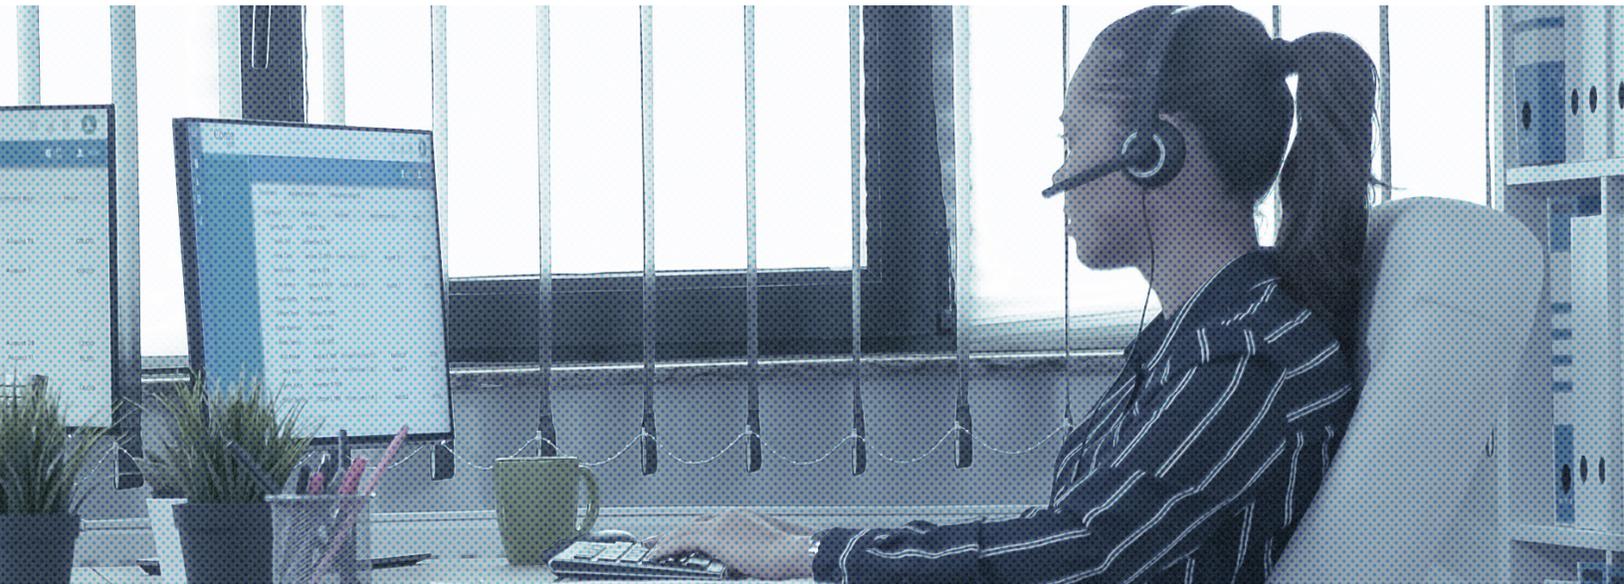

The featured article in this issue is about the American Community Survey, which is conducted by the U.S. Census Bureau. It’s one of the richest sources of information about our state’s workforce (and a lot of other stuff). Census recently updated their website, so it seemed like as good a time as any to talk about it and show you how to pull your own data. This is particularly helpful when you’re looking for information for a unit of geography smaller than what LMI estimates ordinarily cover. You’ll probably have to contend with an estimate that averages five years of survey records, but if you want to know about employment and wages in your particular neighborhood or small town, it’s the best option.

Last but not least, LMI is continuing to hire good people. [Click here for more information.](#) And as always, if you need our help or have ideas for what we can do better, please don’t hesitate to email us at Lmicustomerservice@dew.sc.gov.

Swelteringly yours,

Bryan P. Grady, Ph.D.
Labor Market Information Director
SC Department of Employment and Workforce

TOOLS OF THE TRADE:

Workforce Data in the American Community Survey

Article I, Section 2 of the United States Constitution requires that the federal government conduct an “enumeration” of all people living in the country once every ten years for the purpose of apportioning seats among the states in the House of Representatives. Originally, this work was done by a temporary Census Office to administer each count, but as the work became more complex, Congress established the U.S. Census Bureau in 1902 to operate on a permanent basis. As the need for all manner of data about our country grew, additional products were added to supplement the data that were collected from the once-a-decade census.

You might remember filling out your 2020 Census form, because we were all spending a lot more time at home during the first

wave of the covid-19 pandemic. As it turns out, there weren't all that many questions to answer. The form only asked for name, sex, race, and ethnicity, along with one question on whether the respondent owned or rented their home. Whatever else we might want to know about the population of the United States has to come from some other source. Between 1970 and 2000, this was accomplished by sending a longer form with more questions to a subset of households. This was eliminated starting with the 2010 Census because something better came along: the American Community Survey, or ACS.

Starting in 2005, the Census Bureau began administering the survey nationwide. The goal is to receive responses from about one percent of the population every year, which is more than

enough to obtain useful information not just at the national level, but for all sorts of geographic scales. For areas with at least 65,000 people, it's possible to get estimates based on a single year of survey responses. If it's smaller than that, you'll have to rely on a five-year average. So, for counties in South Carolina, about half of them are big enough to have one-year estimates available, while the other half are not. Five-year averages are available for areas as small as block groups, which are essentially neighborhood-level boundaries, as well as for all cities and towns, no matter how small (though the margin of error might get rather large).

What data can we get from ACS? Not surprisingly, a lot. There are sections of the questionnaire dedicated to housing, education,

health insurance, disability status, veteran status, and more, along with a lot of questions about employment. You can find this information by going to data.census.gov. On this page, there's a search box that looks a lot like what you might find from a search engine, but it's probably not going to give you exactly what you're looking for quite as easily. You will probably need to look through several tables and may need to change some of the parameters to get the right data.

Let's see what this looks like on the website. One data set produced by the LMI Division, Occupational Employment and Wage Statistics, reports the number of workers by occupation, but only at the state or regional level. What if I want these data by county? ACS can help. I put the words "occupation for all

counties in South Carolina in 2019” into the search box. (Why 2019? The pandemic disrupted collection of data in 2020, leading to incomplete production of “experimental” one-year estimates, and 2021 data are not yet available.) Here are the results:

You can see the first result is Table S2401: Occupation by sex for the civilian employed population 16 years and over. This seems to fit the bill, though the categories are a bit broad. You can see that there are filters for geography, year, and topic based on what I typed in. If I scroll down the list of tables at left, there is another option (Table B24010: Sex by occupation for the civilian employed population 16 years and over) that provides a higher level of detail. I can scroll to the right within the table to see all the data, but it’s probably better to just download an Excel or CSV file, which you can do above the table on the right.

Note that not all counties are included; this is because the default is for one-year estimates, which as discussed earlier, aren’t available for smaller counties. If you want to switch to five-year data, and

they’re available, you can use the drop-down menu to view 2015-2019 averages instead, which will be there for all counties. And again, this sort of analysis can be done for all sorts of areas. Maybe you want the data by school district, or legislative district, or ZIP code ... those are all options available in ACS.

But what if the question you have isn’t answered by one of the preset tables? That’s where microdata come in. Alongside what is released on data.census.gov, the Census Bureau also publishes the complete set of responses to the survey, but with any identifying information removed. To make sure no one can figure out what responses came from which people, the only geographic information provided is the Public Use Microdata Area (PUMA) in which the respondent lives. PUMAs are regions drawn such that there are more than 100,000 people in each one. South Carolina is divided into 30 of them; some located in urban areas are relatively small, while in rural communities, they can cover as many as six counties.

While the Census Bureau does publish these data themselves here, the most commonly used source for microdata is the IPUMS USA website maintained by the University of Minnesota. IPUMS makes it easier to select exactly what data you want and provides clear documentation on what is and isn't available. Even so, this is a tool for power users that have experience with econometric analysis, so if that isn't you, there might be some further reading to be done. Or if you have questions, you can just reach out to the Labor Market Information team by emailing lmicustomerservice@dew.sc.gov. We're here to help you find the data and insights that you need.

SOUTH CAROLINA'S EMPLOYMENT SITUATION (JUNE 2022)

Household Survey¹ (Local Area Unemployment Statistics)

EMPLOYMENT: The seasonally adjusted, monthly survey of households estimated the number of South Carolinians working increased to 2,326,257.

- That is an increase of 4,288 people over the May estimate.
- That is a significant increase of 56,048 people over the June 2021 estimate.

UNEMPLOYMENT: The estimate of unemployed people declined to 78,101.

- That is a decrease of 1,028 people from May's estimate and a significant decrease of 19,244 over the June 2021 estimate.
- The state's seasonally adjusted unemployment rate declined to 3.2 percent from May's estimate of 3.3 percent.
- Nationally, the unemployment rate was unchanged at 3.6 percent, according to the Current Population Survey.

LABOR FORCE: The state's estimated labor force (people working plus unemployed people looking for work) increased to 2,404,358 from May's level of 2,401,098.

- That is an increase of 3,260 people over the May estimate.
- That is an increase of 36,804 individuals over the June 2021 estimate.

Employer Survey² (Current Employment Statistics)

NONAGRICULTURAL EMPLOYMENT BY INDUSTRY (SEASONALLY ADJUSTED³)

The monthly survey of businesses in South Carolina marked an estimated increase of 5,100 nonfarm payroll jobs over the month to a level of 2,214,300.

- Industries that reported gains were Government (+2,100); Trade, Transportation, and Utilities (+2,000); Professional and Business Services (+1,000); Manufacturing (+600); Leisure and Hospitality (+500); and Financial Activities (+100).
- Industries marking declines were Construction (-900); Education and Health Services (-200); and Information (-200).
- Other Services showed no change

From June 2021 to June 2022, South Carolina's economy has picked up 76,100 seasonally adjusted, nonfarm jobs.

- Industries with strong growth were in Trade, Transportation, and Utilities (+21,800); Leisure and Hospitality (+20,600); Manufacturing (+11,200); Financial Activities (+7,000); Professional and Business Services (+5,000); Other Services (+4,400); Government (+4,200); Information (+2,100); and Education and Health Services (+200).
- The Construction industry declined (-800).

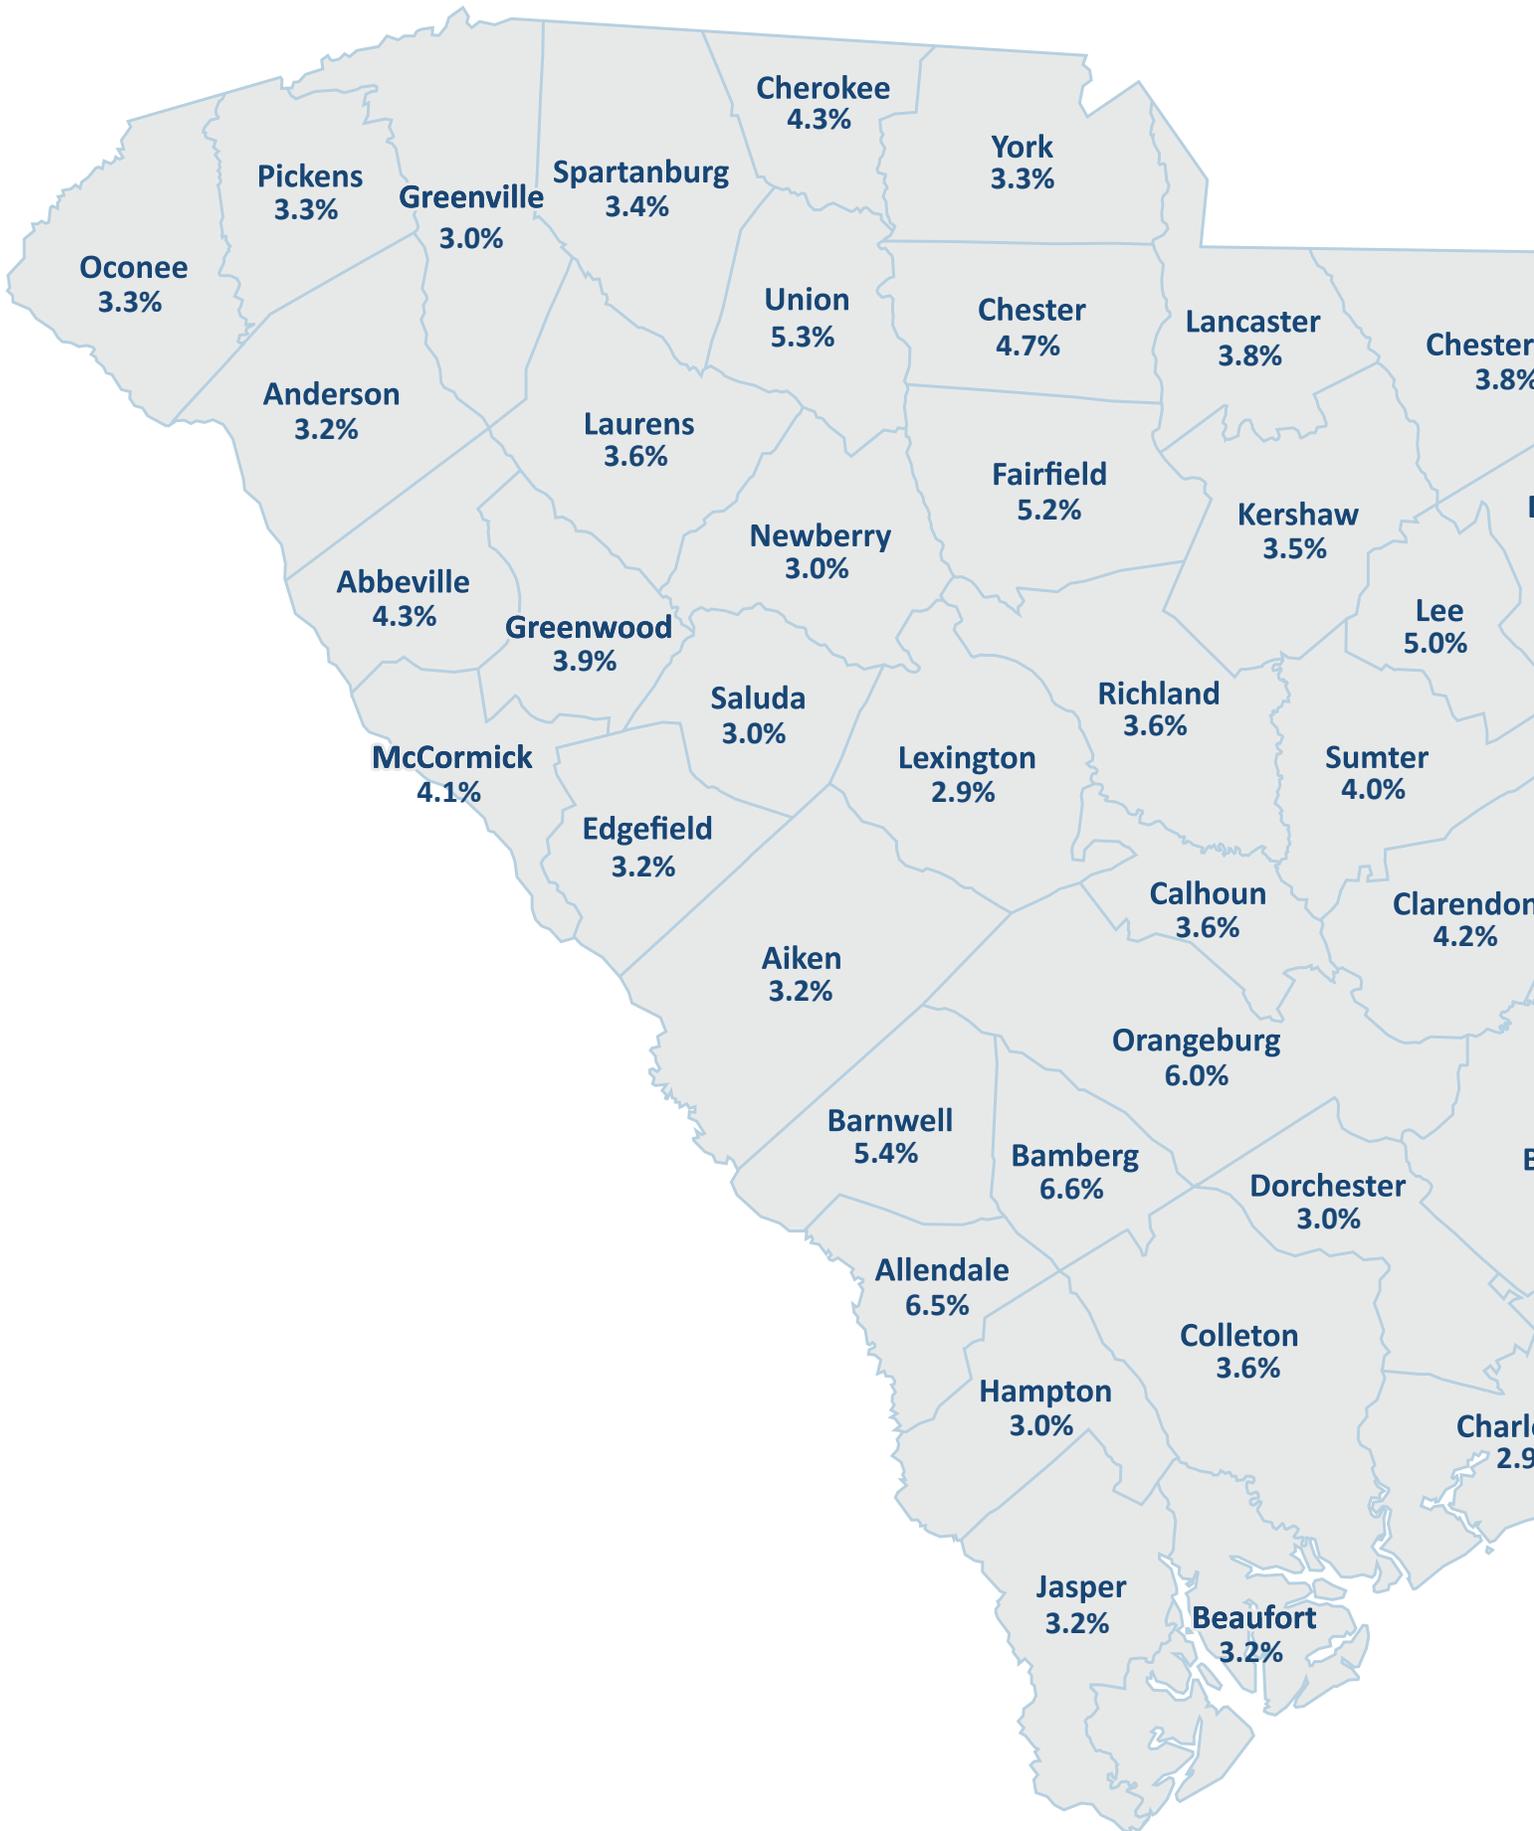

NONAGRICULTURAL EMPLOYMENT BY INDUSTRY (NOT SEASONALLY ADJUSTED⁴)

Not seasonally adjusted, nonfarm payroll employment increased by 12,200 from May 2022 to June 2022 for a total of 2,229,500.

- Increases were reported in the Leisure and Hospitality (+9,700); Trade, Transportation and Utilities (+6,400); Manufacturing (+1,000); Financial Activities (+700); Other Services (+200); and Mining and Logging (+100) industries.
- Decreases were reported in the Government (-3,700); Construction (-1,000); Education and Health Services (-900); Professional and Business Services (-300) industries.
- The Information industry showed no change

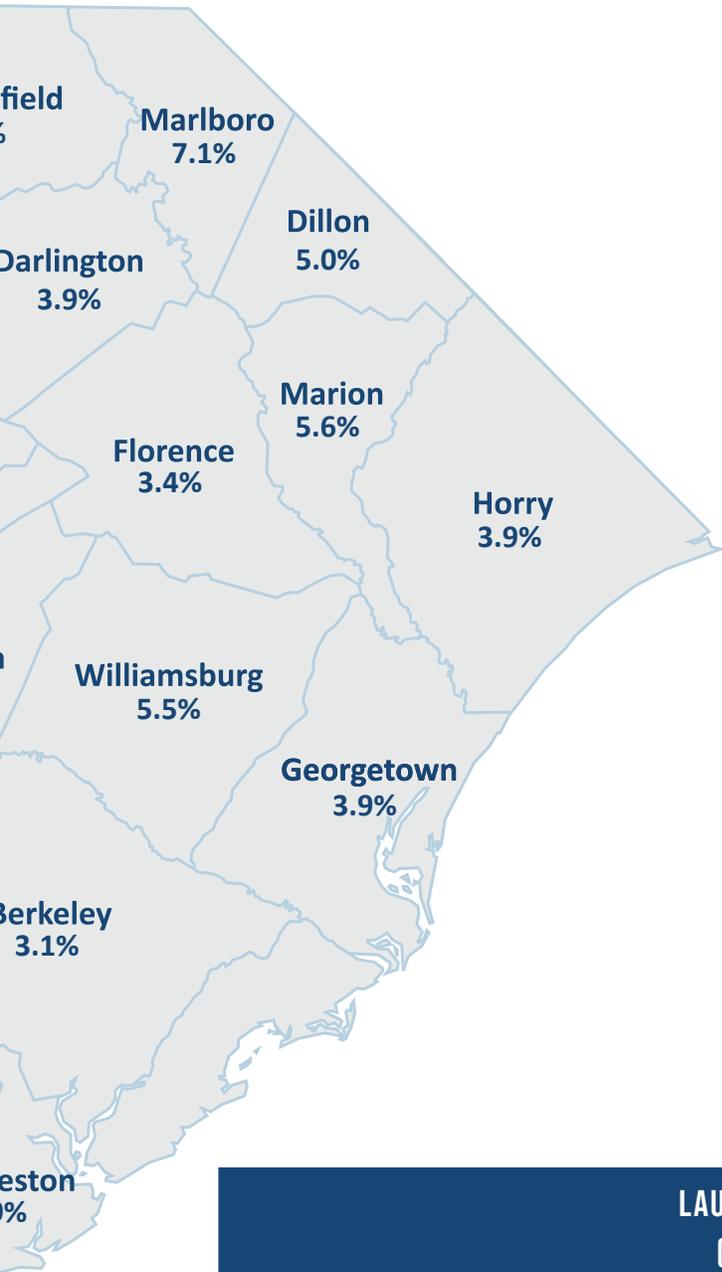

Since June 2021, not seasonally adjusted, nonfarm jobs were up 80,800 in South Carolina.

- Industries making strong annual gains were Trade, Transportation, and Utilities (+23,800); Leisure and Hospitality (+23,500); Manufacturing (+10,700); Financial Activities (+7,200); Professional and Business Services (+6,600); Other Services (+3,900); Government (+2,900); Educational and Health Services (+1,600); and Mining and Logging (+400).
- The Construction (-2,100) industry showed a decline over the year.

2020	\$888.31	34.1	\$26.05
2021	\$925.41	34.3	\$26.98

TECHNICAL NOTES

- Household Survey:** Nationally, there is a monthly Current Population Survey of about 60,000 households conducted by the Census Bureau for the Bureau of Labor Statistics (BLS) to determine employment status of the civilian population. This information, along with other inputs, are used by DEW to operate the Local Area Unemployment Statistics program, which estimates the number of individuals employed and those not employed, but actively seeking employment for statewide and a variety of sub-state geographies.
- Employer Survey:** BLS conducts a monthly Current Employment Statistics survey of about 44,000 employers which yields national estimates of nonagricultural wage and salary employment, hours, and earnings by industry. These data are processed by DEW to generate comparable data for the state and its metropolitan statistical areas.
- Seasonally Adjusted:** Seasonal adjustment removes the effects of events that follow a regular pattern each year (i.e. tourist-related hiring and school closings in the summer). These adjustments make it easier to observe the cyclical and other nonseasonal movements in data over time.
- Not Seasonally Adjusted:** Effects of regular or seasonal patterns have not been removed from these data.

CURRENT EMPLOYMENT STATISTICS (CES)	LOCAL AREA UNEMPLOYMENT STATISTICS (LAUS)
Data is published by Industry	Data is published by County
Counts Jobs	Counts People
Utilizes an Establishment Survey	The Current Population Survey (CPS), which is a Household Survey , is used to calculate LAUS
Reference week is the Pay Period that includes the 12 th of the month	Reference week is the Calendar Week that includes the 12 th of the month
A job held by a person on unpaid leave during the reference week is not counted since they are not receiving pay	A person on unpaid leave is counted as employed because they will return to their job
Does not count self-employed workers	Does count self-employed workers
Does not include agricultural workers	Includes both agricultural and non-agricultural workers
Does not count unpaid family workers	Counts unpaid family workers if they worked at least 15 unpaid hours for a family business or family farm during the reference week
Workers on strike during the entire reference period are not counted	Workers on strike during the reference week are counted as employed in LAUS
